Taf- todoist

Test automation project (UI and API testing) for *todoist web app.*

Todoist is a web service and a collection of task management software.

By Nataliya Kleschenko https://github.com/NataliyaKleschenko

Used technology stack:

TestNG

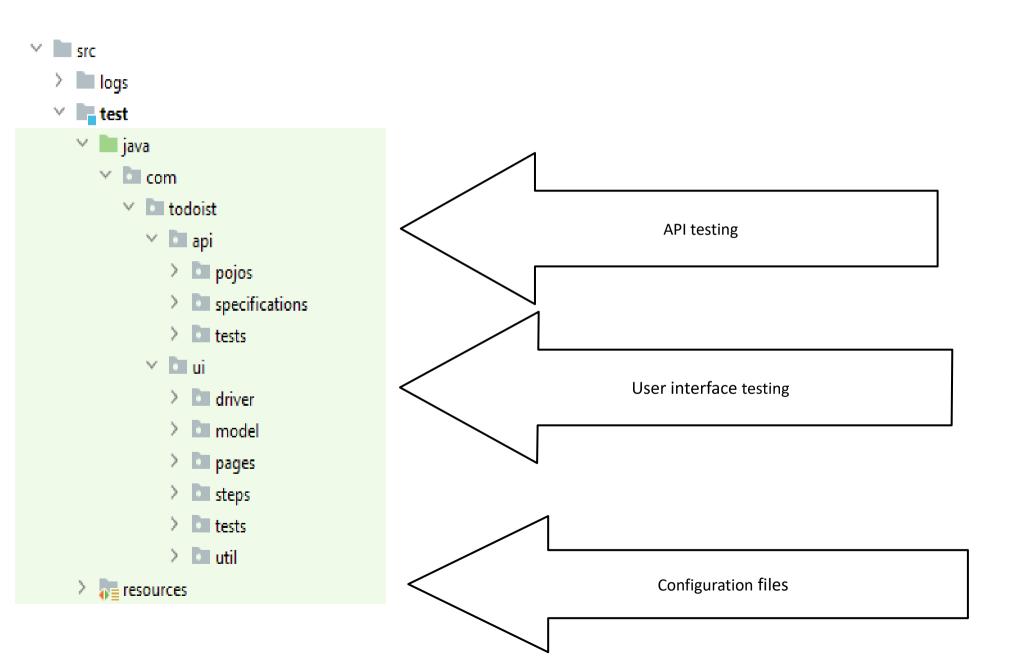

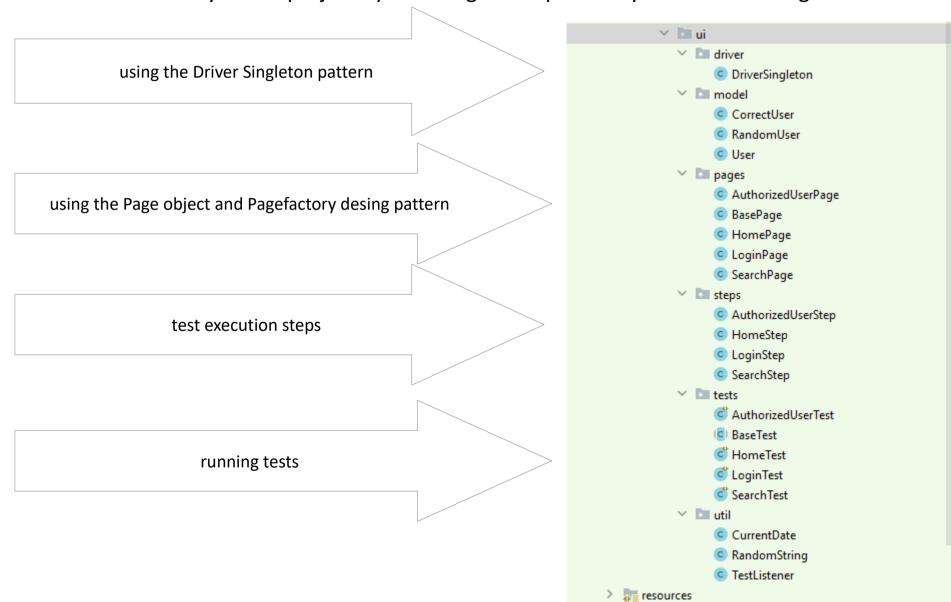

The project is written in JAVA, using Gradle as project builder. Selenium is used to test the user interface, Rest Assured is used to test the application programming interface. Allure framework is used for reporting.

Project structure:

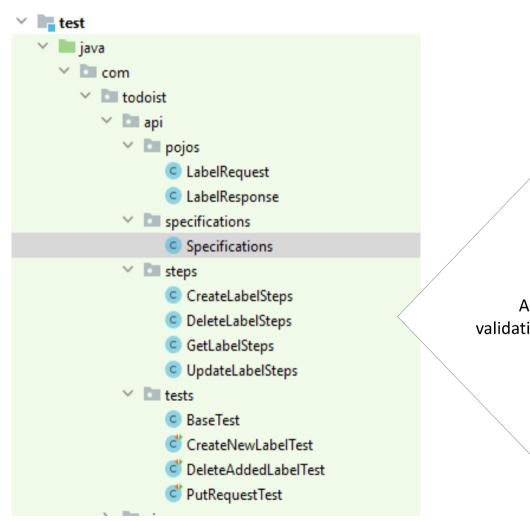

UI testing:

To automate the actions of the web browser, I use Selenium WebDriver, having previously connected the library to the project by installing the dependency in the file build.gradle.

API testing

API testing by sending requests and checking status codes, validating payloads with valid data, and checking error messages

Set up a continuous integration process in Jenkins
